SpeechLP

One year since our first ASHA.

We came to ASHA 2025 brand new. Here's what a year of speech practice at home has looked like.

3x
more children practicing every week than in July

40,000+
words practiced in our games in the last 16 weeks

300+
hours of speech practice in the last 16 weeks

3,900+
new installs in the last 16 weeks

850+ SLPs and 800+ families have signed up to hear from us

New since last ASHA

- **Connected to SpeechTherapist.app.** SLPs assign practice, families play it at home, and progress comes back to the SLP.
- **An age-based screener for ages 3 to 9,** with words aligned to McLeod and Crowe (2018) acquisition norms.
- **24 sounds, in every word position,** across 7 games kids say out loud.
- ***Learn to Speak and Read,*** our picture book for ages 1 to 6, and a parent poster of speech sound ages. Free poster, plus our book with a SpeechTherapist.app trial, while they last!

Let's talk

Researchers: our first practice report is out, a descriptive preprint of 101 returning profiles across two months, at speechlp.com/research. We're looking for university partners for what comes next.

Schools and clinics: we'd love to hear what would make home practice work for your caseloads.

SLPs: tell us what to build next. Built with practicing SLPs, and always listening to more.

Booth 2046

ASHA 2026, Indianapolis, Nov 19 to 21 | speechlp.com

Shail Silver shail@speechlp.com
Alissa Fox, MS, CCC-SLP alissa@speechlp.com
Mari Gottlieb, MA, CCC-SLP mari@speechlp.com

Last 16 weeks: July 16 to November 4, 2026, in-app usage data. The 3x compares four-week averages. Email list counts as of October 16, 2026.
